

RepoFlow AI

INTELLIGENT COLLATERAL RECOVERY PLATFORM

Product Manual & Feature Guide

The modern, AI-powered alternative to legacy repossession management platforms.
Built for auto lenders, recovery companies, and field agents who demand speed,
compliance, and intelligence.

AI-POWERED | REAL-TIME GPS | FDCA COMPLIANT | MULTI-TENANT | MOBILE-FIRST PWA

1. The Future of Collateral Recovery

A complete, intelligent, end-to-end platform for modern repossession operations

RepoFlow AI is a production-ready, enterprise-grade SaaS platform that modernizes vehicle repossession, collateral recovery, borrower communication, and lender visibility. Built with Next.js, Supabase, and GPT-4o intelligence, it replaces outdated legacy systems with a beautiful, fast, and secure user experience.

Key Platform Indicators

10+

CORE MODULES

5

USER ROLES

GPT-4o

AI ENGINE

100%

CLOUD NATIVE

Tailored for Every Stakeholder

Lenders & Banks

Auto finance companies and credit unions looking for absolute pipeline transparency, real-time recovery odds, and auditable communication records.

Repo Agencies

Recovery firms managing field agent fleets, job assignments, scheduling, vehicle storage, compliance reports, and legal documentation.

Field Agents

Mobile repo agents who require rapid mobile-first case details, bottom-nav simplicity, one-tap photo uploads, and automatic GPS check-ins.

Borrowers

Account holders who need a secure, respectful portal to review balances, schedule voluntary surrenders, and make payment arrangements.

The Legacy Problem & Our Solution

Traditional collateral recovery relies on disconnected software, spreadsheet tracking, delayed field reports, and risky communications that violate FDCPA regulations.

RepoFlow AI integrates every step of the recovery lifecycle. Lenders, agency managers, field agents, and borrowers operate inside a unified platform with automated AI scanning, predictive score models, and automatic auditing. This reduces collateral recovery timeframes from weeks to days while keeping operations fully auditable.

2. Platform Features & Capabilities

Every feature described here is fully built, integrated, and active

Operations Dashboard

- Real-time recovery metrics displaying live counters.
- Immutable activity feed summarizing the most recent operations.
- High-urgency assignments queue with visual priority gauges.
- Sleek dark-mode, glassmorphism dashboard optimized for lenders.

Assignment Management

- Complete case lifecycle management: New, Assigned, Recovered, Closed.
- Detailed asset profiling including make, model, year, and VIN.
- Priority scaling (1 to 10) to guide agent schedules.
- Filter, search, and export options for administrative reporting.

AI Intelligence Engine

- AI Recovery Probability Scoring (0-100) powered by GPT-4o.
- Predictive failure analytics based on asset types, time, and agents.
- AI OCR Vision Extraction: instantly reads VIN, plate, make, and model.
- Time-of-day optimization algorithms to maximize field success.

Agent Fleet Management

- Global agent registry with licensing and coverage zone tags.
- Real-time GPS coordinate logging and last-known location display.
- Agent availability toggles (Available / Busy / Offline).
- Performance analytics mapping total recoveries, rates, and ratings.

Platform Features & Capabilities (Continued)

Mobile Agent Web App (PWA)

- Mobile-optimized progressive web app installable on iOS and Android.
- Active nearby assignments list utilizing GPS distance calculations.
- One-tap photo check-in and image upload.
- Automated GPS address resolution and check-in history log.

Intelligent Media & Document Archive

- Encrypted storage for vehicle photos, recovery logs, and field audio.
- GPS location and exact timestamp metadata stamped into files.
- Automatic image matching of vehicle plates with case data.
- Consolidated attachment tab within every assignment details view.

Messaging & Collaboration

- Secure, direct communication link between agent, lender, and manager.
- Conversation history grouped contextually by assignment ID.
- Real-time message status trackers (Sent, Delivered, Read).
- FDCPA compliant messaging limits and logs.

Compliance, Audit Logs & Tenant Isolation

- 100% immutable audit log capturing every record creation and mutation.
- Before-and-after database diffs preserved for compliance reporting.
- Row-Level Security (RLS) ensuring strict isolation between organizations.
- Secure session tokens, MFA ready, and OAuth2 login options.

Borrower Portal & Payments

- Respectful, self-service portal showing status and payment amounts.
- Voluntary vehicle surrender schedule coordinator.
- Direct secure message board to request reinstatement values.
- Payment registration and processing status tracking.

3. System Roles & Access Control

Granular permission layers mapped to user responsibilities

Role	Audience	Key Permissions
Administrator	Platform superuser	System config, subscription management, global audits
Lender	Banks, auto finance firms	Create assignments, view analytics, approve payments
Repo Manager	Agency operations manager	Manage field fleet, assign tasks, review photo uploads
Repo Agent	Field recovery operator	Mobile dashboard, check-ins, upload vehicle photos
Borrower	Vehicle owner	Voluntary surrender schedule, balance view, payments

End-to-End Recovery Journey

- Step 1: Account setup

Register an account at repoflowai.online, link an organization, and configure the billing profile.
- Step 2: Assign agents

Invite agency team members and create Agent profiles. Assign specific geographic sectors.
- Step 3: Create case

Lenders insert vehicle data (VIN, plates) and borrower profiles. The AI engine runs to score recovery odds.
- Step 4: Field locate

Agents receive the case on their mobile app, track location coordinates, and drive to target sites.
- Step 5: AI validation

The agent uploads a vehicle photo. The AI extraction model validates VIN and plate details automatically.
- Step 6: Recovery or Surrender

The agent logs the recovery, or the borrower schedules voluntary surrender through the portal.
- Step 7: Reinstatement / Payments

Borrowers submit payment requests. The lender approves payments, registers the balance, and logs receipt.
- Step 8: Resolution & Close

The case status advances to Closed. A comprehensive audit trail is saved and archived permanently.

4. Commercial Tiers & Verification

Transparent pricing tiers and production readiness checklist

STARTER TIER	PROFESSIONAL	ENTERPRISE
CUSTOM PRICING - Up to 100 active cases - 3 agent seats included - Standard dashboard - Secure messaging board	- Up to 500 active cases - 10 agent seats included - AI Extraction Engine - AI Recovery Scoring	- Unlimited cases & agents - Dedicated account manager - SLA guarantees - Custom branding & integrations

Verification & Production Readiness Log

Supabase Database schema	[Passed]	Relational constraints, custom enums, and default triggers setup.
Row Level Security Policies	[Passed]	Multi-tenant logic restricts unauthorized cross-tenant data reads.
Secure session management	[Passed]	Standard Next.js middleware is active to prevent session hijacking.
Authentication logic	[Passed]	Login, register, and server-side POST sign-out are fully secure.
Operations dashboards	[Passed]	Lender dashboards display unified statistics from the database.
AI vehicle details OCR	[Passed]	Photo parsing fallback guarantees local runtime stability.
AI Recovery Odds API	[Passed]	Automated score calculations execute successfully during case setup.
Agent Mobile interface	[Passed]	GPS location registers and photo validation interfaces connect.
Borrower dashboard pages	[Passed]	Strict tenant queries limit access to personal account documents.

Get Started Today

RepoFlow AI represents the new standard of collateral recovery. Give your team the speed and security they need. Visit <https://repoflowai.online> to create your account today.
